

Patient Readmission Risk Assessment

1. Patient Demographics & Admission Info

Patient Name / ID:	Patient 1	Admission Date:	02/07/2025
MRN:	MRN-100000	Discharge Date:	02/08/2025
Gender:	Female	Admission Type:	Urgent
Race:	Caucasian	Discharge Disposition:	Discharged to home
DOB / Age:	01/21/1998 (28 yrs)	Primary Insurance:	Self-Pay

2. 30-Day Readmission Risk Analysis

Calculated Readmission Risk: 42.0%
Risk Classification: MEDIUM RISK

3. Explainable AI (SHAP) Clinical Driver Analysis

Narrative Explanation:
Patient has general risk baseline profile. No dominant risk factors identified.

Top Risk Drivers (Waterfall Breakdown):

Clinical Feature	Patient Value	SHAP Impact	Clinical Interpretation
Length of Stay	4.00	Decreases Risk (-0.0%)	Neutral impact
Previous Admissions	1.00	Decreases Risk (-0.0%)	Prior encounters strongly flag readmission vulnerability.
Number of Diagnoses	3.00	Decreases Risk (-0.0%)	Neutral impact
Number of Procedures	2.00	Decreases Risk (-0.0%)	Neutral impact
Has Diabetes	0.00	Decreases Risk (-0.0%)	Neutral impact
Has Circulatory	0.00	Decreases Risk (-0.0%)	Neutral impact

4. Recommended Follow-Up Transitional Care Actions

- **Transitional Coordinator Follow-up:** Schedule check-in call within 48 hours of discharge.
- **PCP Appointment:** Arrange a primary care visit within 14 days of discharge.
- **Self-Management Education:** Provide booklets on condition indicators (CHF weight logs, diabetic care guides).
